Blind Spots and Safe Maneuvering

What this Safety Talk Covers:

The "Dos" and "Don'ts" for preventing vehicle accidents due to blind spots at a worksite or in the oilfield.

Discussion Notes:

Discuss the outcomes of the "Dos" and "Don'ts."

Do

- ✓ Complete a full 360-degree walkaround before moving your vehicle or equipment.
- ✓ Use a spotter when backing up or maneuvering in tight spaces, particularly near frac tanks, flare stacks or between rows of pipe where visibility is obstructed.
- ✓ Communicate clearly with other crews working in the area before moving any large equipment or vehicles. Miscommunication between operators and roustabouts can lead to serious incidents.
- ✓ Double-check blind spots in high-traffic areas like loading zones, chemical transfer stations, near portable buildings and in other spaces where workers may be walking or standing without being seen.
- ✓ Ensure mirrors and backup cameras are clean and properly adjusted before use. Mud, dust and grime can quickly obscure your view.
- ✓ Maintain awareness of changes to the site layout. Equipment is moved often in the oilfield, and yesterday's clear path may be today's blind spot hazard.

- **Don't** X Assume spotters see everything—their visibility may be limited, too, especially in lowlight or dusty conditions common at pipeline and drilling sites.
 - x Rely solely on backup alarms to alert nearby workers. Loud environments like compressor stations or near generator trailers can drown them out.
 - x Skip your walkaround, even if you're "just moving a few feet"—many accidents happen during short, routine maneuvers.
 - x Park in blind spots near wellheads, manifold or egress routes, where you may block emergency access or create a hazard for other drivers.
 - x Use handheld radios or phones while maneuvering equipment.
 - x Ignore temporary signs, cones or flags, even if you think you know the site. Conditions on a site change constantly and signs are there for a reason.

Circle the correct answer below.

- 1. Before moving a vehicle or equipment, you should always:
 - a. Perform a 360-degree walkaround
 - b. Honk the horn twice
 - c. Turn on the windshield wipers
 - d. Ask your supervisor for permission
- 2. In high-noise oilfield environments like near compressor stations, why shouldn't you rely only on backup alarms?
 - a. They're not allowed in those areas
 - b. They're only audible to the driver
 - c. The alarms may blend into background noise and go unheard
 - d. Backup alarms automatically disable in loud areas

- 3. Which of the following is NOT a recommended practice?
 - a. Using a spotter in tight spaces
 - b. Relying solely on your spotter to notice hazards
 - c. Cleaning mirrors and cameras before use
 - d. Watching for foot traffic near pipe yards
- 4. Site layout changes frequently. What should you do to stay safe?
 - a. Ignore cones and temporary signage
 - b. Always park near the same landmarks
 - c. Assume yesterday's path is still safe today
 - d. Stay alert to new obstacles and equipment placements
- 5. A walkaround is only necessary if you're moving a vehicle more than 50 feet.
 - a. True
 - b. False
